

**Stain removal for**  
**All Natural and Engineered Stone, Concrete Style**  
**Materials**

---

The listed types of stains can be removed with the following Lithofin products. Many stains disappear entirely with a single treatment; whereas with other heavier or older stains residual marking even after repeated application could remain. The result of cleaning can depend on the material being cleaned and if that stain has damaged the composition of the stone surface. Surfaces should be kept in a clean state with impregnating sealers reapplied as required and stains cleaned immediately. Maintain surfaces with recommended Lithofin maintenance cleaners.

**Explanation:**

**1. Product is recommended**

**2. Apply if no success with the recommended product.**

<sup>\*1</sup> Do not apply to polished or honed marble, limestone, travertine or concrete style materials

<sup>\*2</sup> To help clean use a scraper, white nylon pad, brush etc. especially on textured surfaces.

<sup>\*3</sup> Ensure that the product does not damage or alter the appearance of the material.

Instructions must be read and understood prior to application and if unsure complete a test area to determine the correct application method and application time. For best results the dilution of concentrated cleaners can be altered to suit a particular cleaning situation.

Important: Acidic cleaners are not suitable on polished or honed marble, limestone, travertine or concrete style materials. Acid etching on carbonate calcite materials like marble, limestone and travertine is not a stain that can be cleaned. Acid etching is damage to the composition of the stone surface and must be mechanically re-polished or re-honed to restore the surface.

Important: Avoid using, resting or placing products on your natural or engineered stone surface that may contain methylated spirits, bleaches, chlorine, acid, citric acid and corrosives. These types of products may cause permanent damage to the stones composition.

This information is provided without any commitment. The use of the product is to be adapted to suite the local circumstances and the surface requiring treatment. In all cases of doubt, test the product first in an inconspicuous area.

Algae & Moss	1. Lithofin ALGEX <sup>*2</sup> 2. Lithofin KF Mildew-Away <sup>*2*3</sup>
